

Electronic Right Gripper Opener - ERGO

Working principle

ERGO is a feature that allows the weaver to program the opening settings of the right hand side gripper via the microprocessor. The device works with a step motor with closed loop control, controlling the opening timing of the gripper clamp.

Advantages

- Less filling waste
- Setting per channel or per yarn count inserted
- Accurate electronic control of the right gripper opening settings
- ERGO settings can be transferred from one weaving machine to another by using a USB stick

Application

For all filling yarns without restriction. Is extremely useful when mixing different yarn counts and when weaving elastic yarns.
