PICANOL

Pick Repair Automation   PRA & PRA II Plus

Working principle

Picanol's Pick Repair Automation (PRA) system automatically restarts the machine after a filling stop, saving valuable time and resources as no intervention by the weaver is required.
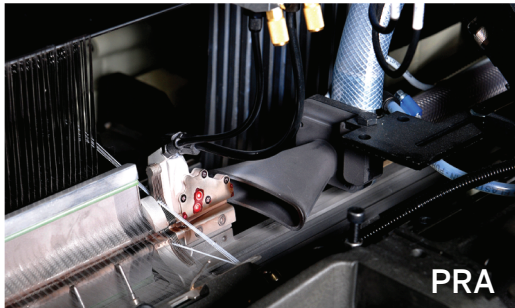

PRA uses a suction nozzle to extract faulty insertions from the fabric.
With **PRA II Plus**, a rotating pneumatic clamp and an improved detection mechanism have been added for increased efficiency.
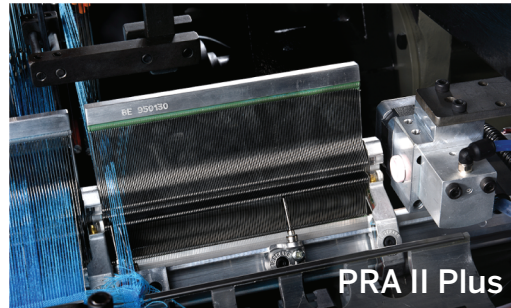

Advantages

	PRA	PRA II Plus
Minimal risk of partial fillings remaining in the shed thanks to right-hand removal	●	●
Works with different yarn types through per-channel adjustment	●	●
Fastest system in the market, minimizing risk on starting-marks	●	●
Easy access for cleaning	●	●
Reliable yarn detection system		●
Highest possible success rate of filling removals		●
Auto-start machine after removal (intervention-free)		●
Pneumatic and mechanical removal of the filling from the fabric		●
