

# SmartCut

## Working principle

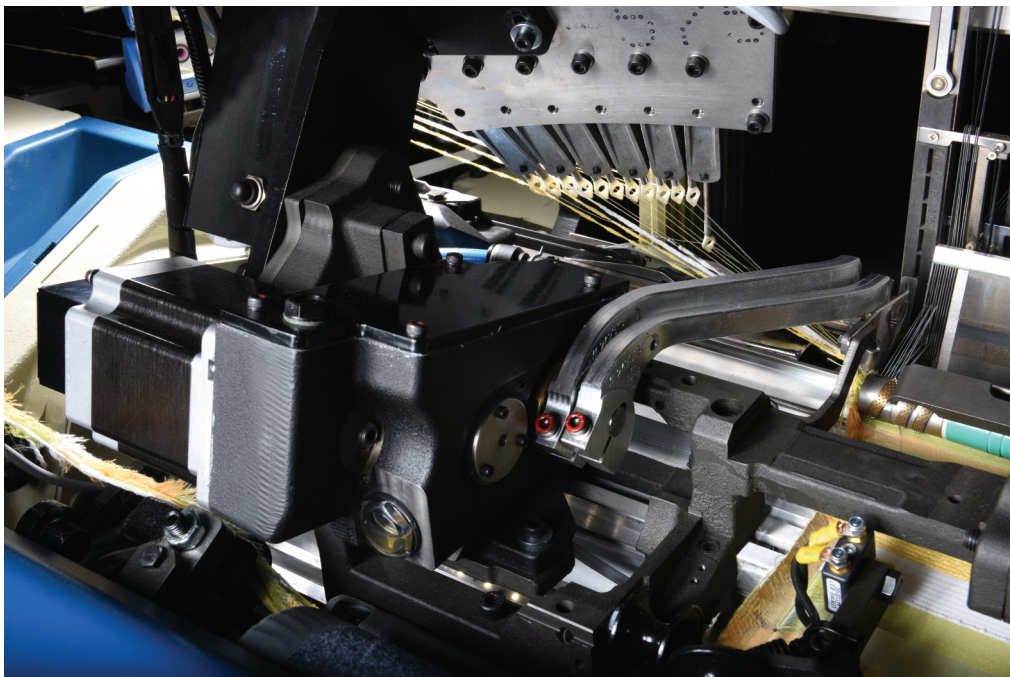

The SmartCut is a filling cutter driven by a motor. Thanks to its independent drive, the cutting moment can be controlled individually and optimized for each individual filling yarn or channel, in order to minimize filling stops and to optimize weaving performance and quality. The SmartCut is micro-processor controlled. Adjustments per channel can easily be performed on the display. As it is an electronic setting, values will be stored together with pattern and machine settings to remain available for later use.

## Advantages

- Independent drive
- Minimizing filling stops
- Can be set during running
- Micro-processor controlled
- Individual cutting time per channel
- Most advanced filling cutter in the market

## Application

Used in case an extreme combination of filling yarns is woven.

### AVAILABLE ON RAPIER:

- OptiMax
- OptiMax-i
- TerryMax-i
- OptiMax-i Connect
- TerryMax-i Connect

Picanol Original Quality Parts offers a wide range of products and solutions to increase the flexibility, performance and profitability of your installed weaving machines. We provide state-of-the-art technology adapted for your weaving machines, helping you to realize maximum weaving results and value of the machine investment.
